

# JOGIA DIAMONDS

## CROWN AND PAVILION ANGLES THAT WORK

CROWN ANGLE	PAVILION ANGLE
32.5	41.4
32.5	41.2
32.5	41.0
32.5	40.8
33.0	41.2
33.0	41.0
33.0	40.8
33.5	41.2
33.5	41.0
33.5	40.8
33.5	40.6
34.0	41.0
34.0	40.8
34.0	40.6
34.5	41.0
34.5	40.8
34.5	40.6
35.0	40.8
35.0	40.6
35.5	40.6

### Important Notes:

- These angles do take into account minor facets and optical symmetry of a diamond.
- Other crown and pavilion angle combinations may produce an ideal cut, but are less likely to.
- These crown and pavilion angles are based on GIA's rounded values.
- Accurate light performance and optical symmetry grading must always be done by a professional with equipment such as The Ideal-Scope, AGS ASET and proportion scanners.
